ITEM: Unit Basic Load (Pallet), MRE

NSN: NA ITEM SPECIFICATION: DSCP FORM 3507 and Assembly Document (ACR-M-026)

APPROXIMATE CALORIC VALUE: Not applicable.

**CHARACTERISTICS OF ITEM:**

There are 48 cases of MREs on each pallet. Each pallet will have 24 "A" cases and 24 "B" cases. At least two boxes in each tier will be oriented to display the TTI label. The pallet load has a fiberboard cap.

For MREs packed prior to May 2006, there should be 3 straps on one side (the width side) and 2 straps on the other side (the length side). Beginning in May 2006, the pallet has three straps on the width side, but none on the length side. In addition, a requirement for stretch wrap around the entire pallet was added.

**DEFECTS LIKELY TO OCCUR:** Torn stretch wrap may hinder the ability of the wrap to hold the pallet load together. Moldy cases may occur if moisture or condensation is unable to evaporate from under the shrink wrap. Pallets may have broken boards or stringers. Case straps may be broken.

**UNIQUE EXAMINATION/TEST PROCEDURES:** None

**SPECIAL NOTES:** None.
